# Real Stone, Professionally Installed

Create professionally installed natural stone surfaces in a fraction of the time of traditional veneer systems. These panels interlock to hide the joints to create a seamless look. Corner pieces further ease the installation and provide the appearance of a natural stacked-stone masonry wall. Natural stone is set into mortar and each panel is shaped so they can be assembled quickly on any surface prepared for thin veneer installation. The hard work of selecting and placing individual stones is done by professionals in a controlled production facility.

## Two Styles Available

Berkshire • New England

## Improved Adhesion

Rough backed surface aids bonding

## Easy to Buy, Easy to Install

Because our panels meet the weight restrictions of natural thin veneer (<15lbs/SF) they can be installed with similar methods. We recommend using ARDEX X77™ (or equivalent) for setting the mortar. This mortar is a fiber reinforced polymerized blend that provides a sound and durable final installation. It also has the added benefit of filling joint aps by sliding the panel into the adjoining panel during installation. Your dealer has all the details.

A close-up photograph of a stone wall made of large, rectangular, greyish-brown stones with rough, weathered surfaces. The stones are laid in a regular, horizontal pattern.

Berkshire

A close-up photograph of a stone wall made of smaller, irregular stones in various shades of grey, tan, and brown. The stones are laid in a more random, rustic pattern.

New England
